

What's Goin' On?

A location based app that connects you to your local community, solves all your neighbourhood problems and lets you know about what's going on in your locality.

Features

1. We'll have multiple channels (like Weather, Traffic, Crimes, Societies, Stores, Restaurants, Lost and Found *[add channels here]*) which have different threads that users can post in so that they can talk and discuss the happenings in the neighbourhood.
2. We can have question cards where users ask questions that are answered by other users. Like you must have seen Google asks some questions about some places (Is there wheelchair accessible parking etc)
3. Users should also be able to post photos if possible
4. Users can subscribe to multiple locations (let's have a 2km radius) and label them as *Work, Home, ,.....*
5. The App should also contain contact information of local authorities like police, fire brigade, mayor etc.
6. We can also help non-profit organisations in the community by having their own threads. This will help connect people in the community to the nearby organisations.
7. We can promote local businesses and help the people in the community grow.
8. We can have the general whereabouts of the local community in the App so that people who have just moved in will have an idea about the place (eg. Nearest Grocery Store, Laundry Service etc).
9. If there is some emergency we can have a feature in the App in which the user can notify the people in his/her community about it. This post will have a high priority and will send a notification to all the people in the community. We can also automatically inform the concerned authorities.
10. In the future our App can take information from standard news applications and websites and automatically make and send posts relevant to the location and thread.
11. We can have a system like Google Rewards to give incentive for people to provide info/ answer questions
